The EIFL Big Six

3. Metrics: Bibliometrics (citations, hindex etc.); Altmetrics (media, social media, web impact...]; Open Research metrics.

a) Skills in the use of Web of Science, Scopus, Dimensions and/or

Google Scholar are necessary to find and update standard bibliometric statistics about a researcher, research group or institution. Not suitable for all subject areas or for many types of research outputs (eg Arts, Humanities / books, chapters) b) An understanding of Altmetrics and the tools supporting 'next generation metrics' should help produce information to balance the bibliometric data with data on a broader type of impact (news items, references in policy papers, social media, Wikipedia entries, etc. c) Open Research metrics: very useful for tracking interdisciplinary impact & non-academic usage. (Hits, downloads, country, source).

[See resources folder for step-by-step introduction to metrics]

Usual and Dual-Task Walking Speed: Implications for Pedestrians Crossing the Road.

Journal of Aging and Health, 28(5), 850-62, 2016 https://doi.org/10.1177/0898264315614004

Authors

Orna A Donoghue - Trinity College Dublin
Cara Dooley - Trinity College Dublin
Rose Anne Kenny - Trinity College Dublin

Abstract

OBJECTIVE: In many countries, pedestrian light crossings require a minimum walking speed of 1.2 m/s. This study examined the proportion of adults in a nationally representative sample whose usual and dualtask walking speeds are <1.2 m/s.

METHOD: Community-dwelling adults aged ≥50 years in The Irish Longitudinal Study on Ageing (TILDA) completed walking speed tests on a GAITRite® walkway (N = 4,909).

Trinity College, Dublin

Trinity College (Irish: Coláiste na Tríonóide), officially the College of the Holy and Undivided Trinity of Queen Elizabeth near Dublin, is the sole constituent college of the University of Dublin, a research university located in Dublin, Ireland. The college was founded in 1592 by Queen Elizabeth I as the "mother" of a new university, modelled after the collegiate universities of Oxford and Cambridge, but unlike these other ancient universities, only one college was ever established; as such, the designations "Trinity College" and "University of Dublin" are usually synonymous for practical purposes. The college is legally incorporated by "the Provost, Fellows, Foundation Scholars and other members of the Board" as outlined by its founding charter. It is one of the seven ancient universities of Britain and Ireland, as well as Ireland's oldest surviving university. Trinity College is widely considered the most prestigious university in Ireland and amongst the most elite in Europe, principally due to its extensive history, reputation for social elitism and unique relationship with both the University of Oxford and the University of Cambridge. In accordance with the formula of ad eundem gradum, a form of recognition that exists among the three universities, a graduate of Oxford, Cambridge, or Dublin can be conferred with the equivalent degree at either of the other two universities without further examination. Trinity College, Dublin is a sister college to St. John's College, Cambridge and Oriel College, Oxford.

m Institution Analytics

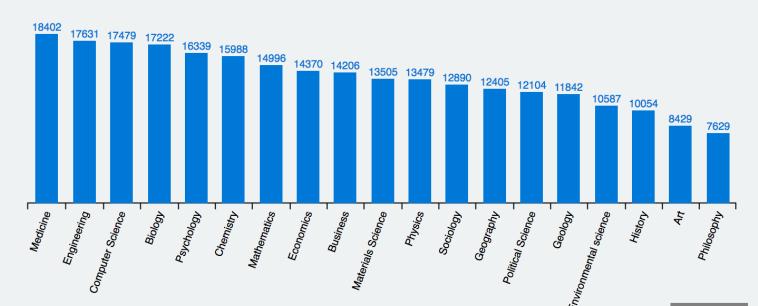

Microsoft Academic extracts author affiliation information automatically from publications and their metadata. Authors' affiliations are listed as they appeared at the time of publication. Authors who have had multiple affiliations may therefore have multiple profiles. Authors can consolidate their publications under one profile by using the claim feature.

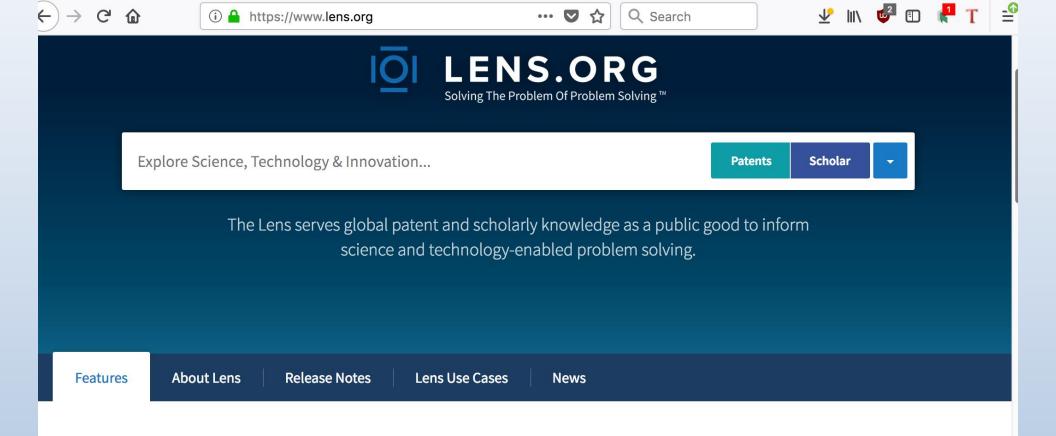

You can run your own complex academic analytics using our data. Please contact us through the Feedback form below to learn about getting access to the Microsoft Academic Graph.

Elizabeth Newnham

Ussher assistant professor in midwifery - Nursing and Midwifery, Trinity College Dublin - Present Adjunct lecturer - Nursing and Midwifery, University of South Australia

Research Gate

Elizabeth Newnham has spent 15 years working in midwifery in both clinical practice and academia. Her research interests and publications to date centre on the effects of risk discourse and power on birthing practices, women's beliefs about labour, epidural use, and identifying how midwives support women's varied needs as well as promote physiological birth and humanised birth.

Issues

- Coverage
- Accuracy
- Disciplines
- Types of outputs
- Altmetric tracking
- No DOIs

Solutions

- Big Six
 - ORCID
 - Profiles
- DOIs (via CrossRef, DataCite, Figshare...)
- Library-based / institutional / researcher analysis & data cleansing.

Summary

- Very strong support for national consortial approach to bibliometric tools and resources for leverage
 purposes with the publisher/vendor (to improve data quality and coverage) as well as price & inclusiveness.
 Current situation = fragmented, patchy with uncertain or zero access for many.
- Major concerns expressed over coverage; coverage of Irish material, particular subject areas (eg Arts Humanities, Computer Science), plus publications types (eg books, book chapters) is of particular concern.
- Data quality issues repeatedly cited: national approach to data cleansing in Scopus/SciVal is required.
- Strong support for national agreement on metrics and common reporting mechanisms across the HE sector and the agencies in line with the Leiden Manifesto and with due regard for all disciplines (not only STEM).
- Repeated calls for national approach to ORCID membership and for a National Research Classification.
 National approach to DOI minting requested.
- Repeated calls for Ireland to follow best practice internationally in terms of governance & resourcing in this
 area (similar to Denmark etc.)
- Support for interoperability with local research systems (including requirement for a national dataset/national citation report).
- Support for Inovation2020 Section 4.7 (joined-up systems institutionally & nationally).
- All tools are flawed but majority favour Scival over InCites with the next most popular choice as 'Both'.
- Need to encourage sharing of entities (Schools etc) across institutions.
- Majority favour Altmetric.com over PlumX for altmetrics.
- Query wisdom of committing costly resources in an increasingly open access world (changing landscape).

Proposed change

'As is'

- Fragmented
- Uneven
- Inequitable
- Uncoordinated
- Unreliable
- Unstandardised
- Unsustainable
- Costly

'To be'

- Joined-up
- Coherent
- More equitable
- Coordinated
- Reliable
- Standardised
- Sustainable
- Cost effective

Requirements

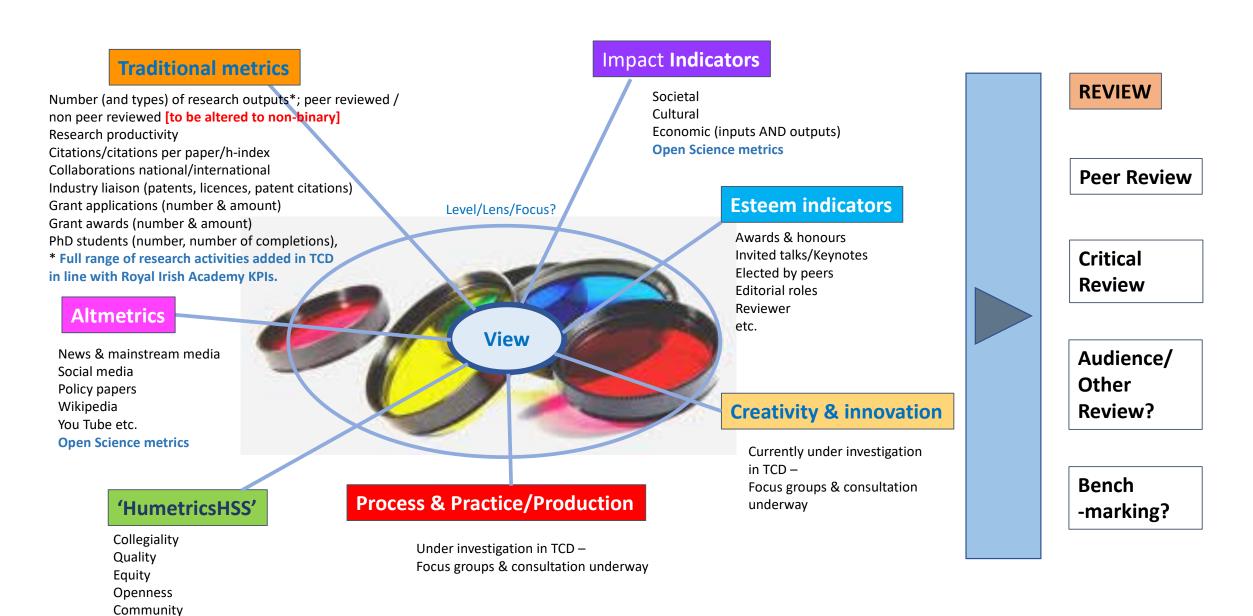

This list of requirements was derived from the comments & feedback of a broad range of experts who were consulted nationally via the HEA National Bibliometric Survey, August 2017.

- 1. A national consortial deal to get a high quality service for a satisfactory price.
- 2. A national data cleansing exercise for all data sources. Integration with ORCID for Ireland.
- 3. Improved coverage is required PRIOR to any agreement, for:
 - a. Types of publications (books, book chapters, conference proceedings at a minimum. Ideally reports, theses...)
 - b. Arts, Humanities and Social Sciences; other disciplines serious gaps to be addressed
 - c. Irish-published research
 - d. Non-English material
- 4. Integration of the 'National Classification Scheme' so that research can be benchmarked across institutions; integrated into the bibliometric tools alongside ORCID and institutional and funder identifiers.
- 5. Support for shared datasets/shared lists of academics, academic units and researcher groups, and/or lists of publications, for each institution to allow benchmarking between universities, department, etc.'
- 6. A customised, common set of metrics for Ireland and corresponding sets of standardized reports/templates on what Irish institutions can use for standard comparisons using a suite of key comparators.
- 7. Built-in ORCID identification/matching system so authors can be correctly disambiguated
- 8. Integration with local CRIS and other systems.
- 9. Inclusion of altmetrics with full access and improved data.
- 10. Delivery of the complete, downloadable and regularly updated national citation report for Ireland i.e. all available research references and citations data for all national research outputs quality controlled, data cleansed, standardised with appropriate identifiers including DOIs.
- 11. Purchased data to be preserved and made available to the purchaser/s at the end of the contract.

National Metrics Platform Workpackages
