Technology enabled networking & collaboration

Over 35% of articles published in journals are based on international collaboration (compared with 25% 15 years ago)

Science is increasingly interdisciplinary

Open access (OA) is free,
immediate, online access to the
results of research, coupled with
the right to use those results in
new and innovative ways

OA for researchers

increased visibility

usage

& impact for their work

new contacts & research partnerships

OA for research institutions

publicises institution's research strengths

complete record of the research output in easily accessible form

new tools to manage institution's impact

OA for publishers

increased readership & citations

visibility & impact

the best possible dissemination service
for research

Directory of Open Access Journals (DOAJ)

DOAJ is an online directory that indexes and provides access to quality open access, peer-reviewed journals.

There is a new process to have journals indexed in the DOAJ. All journals must apply using our new [Application Form](#). Due to the extensive and detailed information we require, only a journal's publisher should complete the form.

DOI: http://dx.doi.org/10.1057/palgrave_jit.2000011**Abstract**
Craig Knight, Asia Pacific Digital Business and Customer Services Manager of Eastman Chemical Company, was given a mandate to sell Eastman's philosophy for an integrated electronic supply chain, otherwise known as the Integrated System Solution (ISS), to its business partners in the region, and to encourage adoption. Having invested in a state-of-the-art technical architecture that would support interconnectivity with all parties along the supply chain, Eastman was keen to realise the full benefits to be gained from an integrated e-supply chain on a global scale. Following numerous rounds of discussion with key business partners in the Asia Pacific region, some progress had been made. Nagase & Co., Ltd. of Japan had agreed to adopt ISS connections with Eastman, but had some reservations regarding the extent of integration. Although the benefits of integration were proven, suppliers, customers, distributors and other interested parties were faced with numerous limitations and considerations that would have significant implications on their established business processes and even the shaping of their corporate strategy. Adoption was not a simple choice. Craig understood these shortcomings and was making every effort to ease the adoption process by identifying the longer-term benefits to Nagase and other business partners of applying XML technology to their businesses.**ISSN** [0268-3962](#)

La Subversive proposal de Stevan Harnad a 20 ans

04/07/2014

20 ans se sont écoulés depuis la [Subversive proposal](#) de [Stevan Harnad](#) (docteur Honoris Causa ULg 2013). Cet appel à l'auto-archivage des publications scientifiques lancé aux chercheurs en 1994, reste l'un des jalons les plus importants dans les débuts de la prise de conscience par les chercheurs de la nécessité

de **se réapproprier** le contrôle de la publication de **leur propre production scientifique**.

C'est donc l'occasion de se pencher sur le chemin parcouru et les avancées actuelles en la matière dans [cette interview de Stevan Harnad par Richard Poynder](#). Il y réaffirme encore l'**importance de l'auto-archivage** à l'heure où l'Open Access Gold (publication par l'éditeur en Open Access) reste dans la majorité des cas encore bien trop coûteux par rapport aux coûts réels de publication actuels (c'est le *Fools Gold*, l'Or des fous).

On constatera également dans cette interview qu'une fois de plus notre modèle de politique Open Access (*Liège model policy*) est cité en exemple. La preuve que nous sommes sur la bonne voie (verte).

Actions points to promote Open Access

27/05/2014

At the start of 2014, several academic institutions cancelled their subscriptions to documentary resources. Not only to small collections, but to large periodicals held by major publishing houses. During the annual contract renewal process, some publishers increase their annual subscription rates from +9% to +42% in some cases.

Libraries cannot and no longer wish to follow this trend. (see [Epidémie de](#)

@bernardrentier:

- University that doesn't know what papers its faculty publishes is like a factory that doesn't know what it produces
- An empty repository is useless; a partly filled repository is partly useless; there is a need for an institutional OA policy

@bernardrentier:

- Don't impose, just inform researchers that only publications in the repository will be considered for evaluation
- Mandate, keep authors at the core, communicate permanently, be coherent, reduce constraints
- @ORBi_ULg – a personal workspace, provides statistics and has a widget to generate publications lists – content in personal/faculties webpages

Snapshot: UoN's progress towards institutionalizing Research Uptake

Print

Friday, 23 May 2014 14:49

Prof. Lucy Irungu of University of Nairobi spoke at the INORMS2014 conference, briefly summarising University of Nairobi's progress in getting research into use.

The University of Nairobi (UON) has made notable progress towards embedding Research Uptake and Research Uptake Management into our institutional structures since the launch of the DRUSSA programme in June 2012. The university has successfully put to use opportunities available through the DRUSSA postgraduate and short courses, so as to strengthen both institutional and individual capacity at UON.

The University of Nairobi (UON) has made notable progress towards embedding Research Uptake and Research Uptake Management into our institutional structures since the launch of the DRUSSA programme in June 2012."

Building institutional Research Uptake Capacity at UON

When looking at progress in embedding Research Uptake capacity at institutional level at our UON, there has been significant development in strengthening the University of Nairobi's institutional structure for research management and uptake.

- Institutional buy-in has been achieved for institutionalizing Research Uptake and management as a core function of the university, with uptake-related activities strongly supported by university management.
- A 'University Communication Policy' has been developed. This policy recommends a strengthened communication office with stronger links between all core function units at the University.
- A 'University Extension and Outreach Policy' has been developed.
- A proposal is being considered to create a position for a Director of Research and Extension. The expert in this position will work closely with the university's communication office, researchers and stakeholders to provide support to researchers and to consolidate and manage the process of getting research into use.
- An Open Access Policy has been developed and implemented. Through this University of Nairobi's digital repository has been strengthened to enhance dissemination of research outputs.
- The university's existing Research Policy has been reviewed so as to align it with the changes in both the university governance structure and the university's strategic plan. The opportunity was also taken to include Research Uptake and utilization in the research policy.
- The university has approved an Innovation Disclosure Form to be used by researchers, so as to encourage a streamlined collection of innovation information.
- The Research Grants Management Information System (RGMIS) has been developed and is currently being piloted.
 - An Innovation Fund has been created to encourage creativity among the university fraternity as well as to enhance possibilities for utilization of new knowledge.
 - The University has taken up membership with Linking Academia with Industry (LIWA) [<http://liwatrust.org>] to enhance the university's engagement with industry.

European Commission

A study funded by the European Commission (EC) suggests that OA is reaching the tipping point, with around **50% of scientific papers published in 2011 now available for free.**

http://europa.eu/rapid/press-release_IP-13-786_en.htm?locale=en

“The tipping point for OA (more than 50% of the papers available for free) has been reached in several countries, including Brazil, Croatia, Estonia, Lithuania, Macedonia, Switzerland, the Netherlands, the US, as well as in biomedical research, biology, and mathematics and statistics.”

Eric Archambault, Didier Amyot, Philippe Deschamps, Aurore Nicol, Lise Rebout & Guillaume Roberge: Proportion of Open Access Peer-Reviewed Papers at the European and World Levels—2004-2011 (August 2013)

http://www.science-metrix.com/pdf/SM_EC_OA_Availability_2004-2011.pdf

OA policies: the majority of 48 major science funders considered both OA publications in journals & self-archiving in OA repositories.

More than 75% accepted embargo periods of between six to 12 months.

Eric Archambault, Didier Amyot, Philippe Deschamps, Aurore Nicol, Lise Rebout & Guillaume Roberge: Proportion of Open Access Peer-Reviewed Papers at the European and World Levels—2004-2011 (August 2013)

http://www.science-metrix.com/pdf/SM_EC_OA_Availability_2004-2011.pdf

Máire Geoghegan-Quinn, European Commissioner for Research, Innovation & Science: **“Putting research results in the public sphere makes science better & strengthens our knowledge-based economy. The European taxpayer should not have to pay twice for publicly funded research. That is why we have made OA to publications the default setting for Horizon 2020, the EU research & innovation funding programme.”**

Launch of the European Science and Technology Network on Unconventional Hydrocarbon Extraction

Event date: 08/07/2014

Brussels

The creation of the European Science and Technology Network on Unconventional Hydrocarbon Extraction was decided in the Commission Communication on the exploration and production of hydrocarbons (such as shale gas) using high-volume hydraulic fracturing in the EU, issued on 22 January 2014. The network aims to "bring together practitioners from industry, research, academia as well as civil society. The Network will collect, analyse and review results from exploration projects as well as assess the development of technologies used in unconventional gas and oil projects". [Read more...](#)

Horizon 2020

**All beneficiaries are
required to deposit
and ensure open
access**

What to deposit

A machine-readable electronic copy of the published version - publisher's final version of the paper, including all modifications from the peer review process, copyediting & stylistic edits, & formatting changes (usually a PDF document) OR

A final peer-reviewed manuscript accepted for publication - final manuscript of a peer-reviewed paper accepted for journal publication, including all modifications from the peer review process, but not yet formatted by the publisher (also referred to as “post-print” version).

Where to deposit

Researchers should deposit in a **repository for scientific publications** (online archives) **of their choice:**

- Institutional repository of the research institution with which they are affiliated
OR
- Subject-based/thematic repository OR
- Centralised repository, e.g. Zenodo repository set up by the OpenAIRE project are acceptable choices.

When

Each beneficiary must deposit **as soon as possible and at the latest on publication.**

Each beneficiary must **ensure open access** to the deposited publication — via the repository — at the latest:

- (i) on publication, if an electronic version is available for free via the publisher, or
- (ii) within six months of publication (12 months for publications in the social sciences and humanities) in any other case.

PASTEUR4OA/Welcome

Welcome to the PASTEUR4OA website!

PASTEUR4OA (Open Access Policy Alignment Strategies for European Union Research) aims to support the European Commission's Recommendation to Member States of July 2012 that they develop and implement policies to ensure Open Access to all outputs from publicly-funded research.

PASTEUR4OA will help develop and/or reinforce open access strategies and policies at the national level and facilitate their coordination among all Member States. It will build a network of centres of expertise in Member States that will develop a coordinated and collaborative programme of activities in support of policymaking at the national level under the direction of project partners.

RED FEDERADA DE REPOSITARIOS INSTITUCIONALES
DE PUBLICACIONES CIENTÍFICAS

2^{da} Etapa

Con el interés de compartir y dar visibilidad a la producción científica generada en las instituciones de educación superior y de investigación científica en América Latina, hemos creado un marco regional de acuerdos técnicos y organizativos para construir la Red Federada de Repositorios Institucionales. Ya contamos con el agregador de información que permite un servicio de búsqueda de publicaciones científicas en varios países de la región. Creceremos juntos.

Research funders in China issue open access policies

Published: 16 May 2014

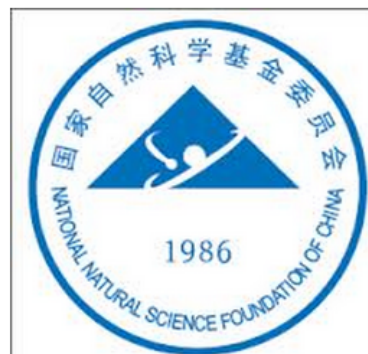

The Chinese Academy of Sciences (CAS) and the National Natural Science Foundation of China (NSFC) have both issued new open access policies which will contribute to making research more available.

The announcement on the Policies on Open Access to Research Articles from Publicly Funded Research, was made on May 15, during a briefing on the coming Annual Meeting of the Global Research Council to be held in May 26-28, 2014, in Beijing, China.

CAS will require its researchers and graduate students to deposit the final, peer-reviewed manuscripts of their research articles resulted from any public funding, submitted and consequently published since the issuing of the policy, into the open access repositories of their respective institutes, to be made open access within 12-months of their official publication.

CAS will also encourage researchers to deposit previously published articles into their respective institutional repositories as well. CAS will also support researchers to publish in open access journals with good quality control and affordable APC.

NSFC will require the researchers funded by it to deposit the final, peer-reviewed manuscripts of research articles resulted from its funding, submitted and consequently published since the issuing of the policy, into the NSFC open access repository, to be made open access within 12 months of their official publication in academic journals.

SPARC Europe welcomes the new UK Open Access policy

Posted by Vanessa Proudman on April 1, 2014

HEFCE has announced the final form of the [Open Access policy](#) that will apply to research outputs funded through the period of the next research evaluation exercise in the UK, the Research Excellence Framework.

The policy is very significant. The REF is a periodic exercise that all British universities and their researchers take extremely seriously as it determines their funding for the next period, so any policy around the REF is certain to be implemented in universities.

This policy requires all journal articles and peer-reviewed conference papers to be deposited in a repository at the time of acceptance for publication, and made Open Access as soon as possible. Where there is no publisher embargo this must be immediately, but embargoes of 12 months in STEM disciplines and 24 Months in HaSS disciplines are permissible, aligning the new policy with the existing permitted embargo periods enshrined in the RCUK policy.

This policy will certainly increase the UK's Open Access levels over the coming years and serves as a well-designed template for other funders, even when a national research evaluation exercise is not the norm.

More on the policy can be found in an article by Alma Swan here: <http://blogs.lse.ac.uk/impactofsocialsciences/2014/04/01/hefce-open-access-ref-gamechanger/>.

Expanding Public Access to the Results of Federally Funded Research

Posted by Michael Stebbins on February 22, 2013 at 12:04 PM EDT

The Obama Administration is committed to the proposition that citizens deserve easy access to the results of scientific research their tax dollars have paid for. That's why, in a policy memorandum released today, OSTP Director John Holdren has directed Federal agencies with more than \$100M in R&D expenditures to develop plans to make the published results of federally funded research freely available to the public within one year of publication and requiring researchers to better account for and manage the digital data resulting from federally funded scientific research. OSTP has been looking into this issue for some time, soliciting broad public input on multiple occasions and convening an interagency working group to develop a policy. The final policy reflects substantial inputs from scientists and scientific organizations, publishers, members of Congress, and other members of the public—over 65 thousand of whom recently signed a *We the People* petition asking for expanded public access to the results of taxpayer-funded research.

To see the new policy memorandum, please

How OA benefits your work and career

Distribution and usage

Immediate access to your research output for everyone upon official publication

More visibility & usage

Immediate impact of your work

Intensification of research through fast dissemination and use of research;

Possibly a citation advantage as well

How OA benefits your work and career (2)

Plus:

Monitoring of your research output

Preservation of your research output by your library

Keep your rights instead of signing them away

Seven benefits to implementing an OA policy

1. Systematically contribute to the greater worldwide visibility of your researchers, their groups, centers, departments, helping to increase their international reach and impact
2. With a greater web presence, help increase your institution's ranking position.

Seven benefits to implementing an OA policy (2)

3. Contribute to the faster innovative and economic growth of your region and your country by providing access to results to other smaller research institutions, SMEs and other industry innovators.

4. Stimulate new research partnerships and project collaborations, and generate further research income for your institution.

Seven benefits to implementing an OA policy (3)

5. Making your institution's knowledge open access means increasing its value by being more accessible and used by professionals, practitioners, business and industry.
6. Increase the social impact and reputation of your institution through greater visibility of research results through more channels.

Seven benefits to implementing an OA policy (4)

7. Demonstrate your institution's commitment to open access and open science in no uncertain terms.
